

Regulator Low Pressure Model

Product Code: C207

These service governors regulate the gas pressure from a 400mbar maximum supply pressure to the appliance service pressure (in the range 9 to 50mbar). They are mainly used in residential and commercial gas installations and are commonly located upstream to a gas meter. Connection options are geometry adapted to the installation, available in line (L models) or at right angle (R models). High capacity depending on inlet pressure range and requested accuracy of regulated pressure.

Applications

- Excellent pressure control with fully balanced seat design providing a stable pressure control in all conditions of inlet pressures and flow rates within the range with full lock-up capability
- Models can deliver up to 6.5 (n) m³/h for natural gas and 7.2kg/h for LPG.
- Can be provided with either: No UPSO. UPSO with manual reset (pull to reset)
